

# MANUFACTURING CAPABILITY

Our commitment to New Zealand Manufacturing

The Rex Group has manufacturing facilities based at four locations in the Auckland region.

- Complete engineering solutions to meet individual requirements.
- Produce one-off projects or large orders.
- Meet our customers' expectations on price, quality and service.

## General Engineering & Fabrication

Our fabrication services include:

- Cutting and bending
- MIG & TIG welding
- Zinc plated, powder coated or painted finish
- Robotic welding for high volume, low cost repeatable welding projects

## Product Design, Development and Manufacture

Our experienced in-house design team will provide:

- CAD facilities streamline the design process and give us the ability to create products from the customers own specifications.

With our total design and manufacture service we'll produce products using:

- Stainless Steel
- Brass and Copper
- Mild and Tensile Steels
- Aluminium
- Nylon and many other Plastics.

## Production Metal Pressing and Component Manufacture

Our metal pressing plant successfully produces products in:

- Steel, Stainless Steel, Copper and Aluminium.

We are able to develop products using:

- Proto-type, production tooling to finished product.
- Press options include automated coil feed
- Air cushions for drawing operations.
- Ten mechanical power presses with capacity from 30 to 200 tonnes.

SOLUTION

## Production CNC Turning and Machining

Our precision turning and machining operation manufactures a comprehensive range of components using the latest in CNC equipment.

Our services include:

- CAD/CAM
- Precision machining
- CNC turning
- 2 and 3 axis
- 2 to 4 axis
- Bar feed components
- Billets and castings
- CNC milling
- Horizontal and vertical
- Tool and die machining from solid models
